

1, Explain uses of ping command in network ?

The ping command is a basic network troubleshooting tool used to check whether one device can communicate with another over a network.

It works by sending (ICMP - Internet control message Protocol) Echo request packets and waiting for Echo reply packets.

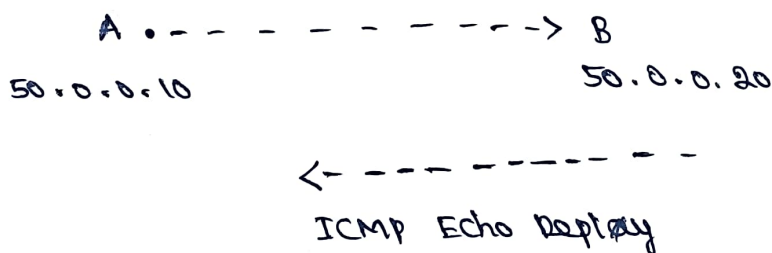

2, Explain netbios protocol ?

Netbios stands for Network Basic input/output system. It is an older networking interface/protocol originally designed to allow computers on a local network to communicate and identify each other by name.

3, Explain SMB protocol ?

SMB (Server Message Block) is a network protocol used mainly for sharing files, folders, printers and other resources between computers over a network.

4, Explain ping process from 50.0.0.10 to 50.0.0.20 ?

Ping = Send ICMP request → destination replies → Measure response time .
